

includes at least one internal compartment for containment of at least one or multiple rods with each said compartment being in open communication with each other, said at least one or multiple rods being used to support an elongated sheet of material thereon, said at least one or multiple rods being independently operated by multiple prior art drive motors, said drive motors being housed within multiple compartments located within each said support member, and each said support member having additional compartments for containment of numerous accessories,

whereby;

said support means and each said support member are independently operable between various up or down positions.

EXAMINERS REMARKS

Specification

1. "The disclosure is objected to because of the following informalities: the disclosure described the "multiple prior art drive motors which are housed within multiple compartments located within first support". In pages 9 and 10, and claim 1, lines 18-19. However, according to the drawings, each of the support members (34, 16, 17) (not just the first support member (34) having multiple compartments (37) to house motors therein. Clarification is required.
